SAFETY RELIEF VALVES

Pressure Relief Valves are used to protect systems from over pressurization. Kingston Valves offers safety valves for air, gas, steam and liquid applications. Our safety valves are used on compressed air systems, air dryers, air tanks, steam sterilizers, boilers and other related applications.

ASME CODE VALVES

KINGSTON KSV & KHV Safety Valves

The KSV & KHV Line offers a diverse range of high-quality, ASME-certified safety valves designed for industrial applications requiring precision, reliability, and corrosion resistance. ASME Code Section XIII and National Board Certified. This line includes the KSV, KSVCRF, and KHV25 Models, each designed to meet stringent safety and performance standards.

KINGSTON ANGLE CHECK VALVE (KAC)

Non-return valve for backflow prevention.

Sizes: 3/8" to 2"
Cracking Pressure: up to 2.9 PSI
Temperature: 14°F to 428°F

- Compact design
- Easy to install and operate
- Durable and long service life

CONTROL VALVES

Kingston Control Valves are used for air, gas, steam, and liquid applications. Our Control Valves are used in air dryers, nitrogen generators, agricultural sprayers, inground lifts, car wash systems, floorcare and upholstery cleaning wands, and other related applications.

KINGSTON PNEUMATIC ANGLE SEAT VALVE (KAV)

Sizes: 3/8" to 2-1/2"
Operating Pressure: up to 232 PSI
Temperature: -20°F to 400°F

The externally piloted angle seat valve is operated with a single or double-acting piston actuator. Available in three different materials. Achieves high flow rates and minimizes pressure drop through the valve.
